

VAIBHAV NARULA

Product Manager | Technical & AI Product Management

+91-72061-42042 | vaibhavnarula927@gmail.com | linkedin.com/in/vaibhavnarula47 | Yamuna Nagar, Haryana, India

PROFESSIONAL SUMMARY

Product-minded engineer with 3+ years leading full-stack delivery for enterprise SaaS and client products, with direct ownership of requirements, prioritization, and go-live across 6+ shipped products. Regularly operates as the primary point of contact between clients and delivery teams — translating business needs into scoped, sequenced roadmaps and defending trade-offs directly with stakeholders. Builds independent AI-powered tools end-to-end (problem framing through shipped product) to validate ideas fast. Combines this product instinct with the technical depth to evaluate feasibility, unblock engineering teams, and speak credibly with both business and technical stakeholders — without needing a translator in either direction.

CORE STRENGTHS

- Requirements Gathering & Prioritization — turning ambiguous client asks into scoped, sequenced backlogs
- Client & Stakeholder Management — sole technical point of contact across 4+ concurrent enterprise engagements
- Cross-Functional Leadership — led 3-person dev team; partnered daily with product, design, and QA in Agile sprints
- Data-Informed Decisions — shipped Power BI dashboards for real-time, executive-level product visibility
- Technical Fluency — .NET Core, React/Next.js, REST APIs, Azure/AWS, SQL Server — evaluates feasibility firsthand
- 0-to-1 Building — independently scoped, built, and shipped 4+ products end-to-end, including a two-sided marketplace

EXPERIENCE

.NET Developer — acting as technical/product point of contact | *Esferasoft Solutions* Oct 2025 – Present

- Owned feature scoping and delivery for EsferaDesk, a SaaS helpdesk platform, prioritizing work that measurably improved performance and end-user usability
- Identified a gap in executive visibility into platform usage and shipped Power BI dashboards, giving leadership real-time, self-serve reporting instead of ad hoc requests
- Represented engineering in sprint planning and retrospectives, working directly with product and design to shape scope before development started
- Drove Azure deployment decisions for new modules, balancing reliability and cost against delivery speed

Software Engineer — team lead & client-facing owner | *Ginilytics IT Solutions* Sep 2024 – Sep 2025

- Led a 3-member team as the sole product and technical owner across 4 concurrent client engagements, running requirements gathering through go-live
- Acted as primary interface between clients and the dev team, converting business requirements into actionable, sequenced development tasks
- Made prioritization calls on performance work (SQL optimization, refactoring) based on client-reported pain points, cutting page load times

Junior Software Engineer | *Ginilytics IT Solutions* Jan 2023 – Aug 2024

- Built and shipped features across 2+ enterprise client projects, from API design through UAT sign-off
- Owned direct client communication during UAT cycles and post-deployment support, closing the feedback loop from bug report to fix
- Partnered with senior engineers and QA to hit delivery milestones on time without compromising quality

PRODUCT CASE STUDIES

Beyond C — Two-Sided Creator/Brand Marketplace (Personal Product) | *.NET, Next.js, Supabase, Instagram OAuth*

Problem: *Creators and brands lack a structured, verifiable way to find and transact with each other.*

- Designed a privacy-first marketplace from scratch: defined the core user flows for both sides (creators and brands), then built campaign bidding, real-time chat, and a credit/wallet monetization model to support transactions
- Added Instagram OAuth verification to solve for trust — a problem generic marketplaces don't address — and architected the backend on Supabase/Next.js for fast iteration

- Owned the product end-to-end: problem definition, scope, build, and architecture decisions, with no external requirements to work from

KNR POS — Multi-Location Point of Sale System | .NET, React Native, Square POS API

Problem: A café/coffee shop client needed a single order flow spanning mobile, admin, and in-store hardware.

- Scoped and delivered a POS system unifying a React Native mobile app and a .NET admin panel on top of Square's APIs, closing gaps in the client's existing order flow
- Owned the client relationship solo — sprint planning, change requests, and release demos — making scope trade-offs directly with the business owner
- Prioritized Azure deployment for uptime and scalability across multiple store locations

Nexus — Bulk Messaging Campaign Platform | .NET, InfoBip APIs, React

Problem: Client needed operational transparency into large-scale SMS/MMS campaigns, not just a send tool.

- Defined and built the feature set — messaging history, balance tracking, delivery-log dashboards — based on what the client needed to trust the system at scale
- Owned delivery end-to-end including change requests, demos, and production handoff

Doc Finance — Financial Data Migration Tool | .NET, QuickBooks, Windows

Problem: Migrating financial data out of QuickBooks Desktop without data loss or duplication.

- Designed the mapping and syncing logic for complex financial parameters, prioritizing data accuracy over migration speed given the cost of errors in financial data

CERTIFICATIONS

- Product Management — Great Learning (May 2025)
- Cloud Computing Architecture — Great Learning (May 2025)
- AWS Training and Certifications — Amazon Web Services (Apr 2025)

EDUCATION

Master of Computer Applications (MCA) — Chandigarh University 2023 – 2025

Bachelor of Computer Applications (BCA) — T.I.M.T. 2020 – 2023

ACCOMPLISHMENTS

- Employee of the Quarter — Ginilytics IT Solutions (Apr 2025)
- All Rounder Award — Ginilytics IT Solutions (Aug 2025)
- Sole technical and client-facing owner across 4 concurrent client engagements
